

Strange Issue with Node Limit 7.x-1.0-alpha4

Sequence of Node Creation Impacts Limits

Initial State All content deleted
Two Node Limit Restrictions:

Limit	3	1
Limit	3	1
Content Type	CT1	Anonymous
Users of Role	Authenticated	Anonymous

Scenario 1

		Step Status	Comment
Step 1	Attempt to add 3 relevant nodes for an Authenticated user	Success	Allowed up to limit
Step 2	Attempt to add 1 relevant nodes for Anonymous user	Success	Allowed up to limit
Step 3	Attempt to add 3 relevant nodes for a different Authenticated user	Fail	Add node for Content Type is not available

Reset to Initial State

Scenario 2 (The same tasks in a different order)

Step 1	Attempt to add 1 relevant nodes for Anonymous user	Success	Allowed up to limit
Step 2	Attempt to add 3 relevant nodes for an Authenticated user	Fail	Add node for Content Type is not available
Step 3	Attempt to add 3 relevant nodes for another Authenticated user	Fail	Add node for Content Type is not available

Reset to Initial State

Scenario 2 (The same tasks in a different order)

Step 1	Attempt to add 3 relevant nodes for an Authenticated user	Success	Allowed up to limit
Step 2	Attempt to add 3 relevant nodes for another Authenticated user	Success	Allowed up to limit
Step 3	Attempt to add 1 relevant nodes for Anonymous user	Success	Allowed up to limit
Step 4 (new)	Attempt to add 3 relevant nodes for another Authenticated user	Fail	Add node for Content Type is not available

Note: In each of the scenarios observed, once an entry has been created by Anonymous, no further nodes can be created.

I subsequently changed the limit for Anonymous to 2. I could resume creating entries for other Authenticated users.
