

How to configure default content type behavior

WE can use the content type to separate the different logical contents and later with their features customization, we will do another works faster. The Drupal knows two default content type : Writing and Page. The only difference of these types is that : while the Writing type is appears default on the starting page, in the content what has temporal currents, till the Page type is not !

We can attain the default content types behavior under the :

[Home](#) > [Administer](#) > [Content management](#) > [Content types](#)

If we click to one of these content types, we may grant the features influencing the behaviour of the content type.

1. Identification

Name: in the name form we can change the default content type's name. This name will appear for the users. the name must be unique, because that will identify the content type. It may only contain words, numbers and space characters.

Type: in the type form we can set the name what the system using for the links. that name must be unique and it may only contain words, numbers and underlining characters.

Description: in the description form we can add a short description from the content type. This description will appear in the add content part under the type name like a comment for the users.

2. Submission form

In this section we can set the submission surface features. this surface is used for the submission of the content.

Title field label: generally not necessary to switch over !

Body field label : generally not necessary to switch over!

A screenshot of the 'Submission form settings' interface in Drupal. The interface is light blue with a white border. It contains several settings: 'Title field label:' with a text input field containing 'Title'; 'Body field label:' with a text input field containing 'Body'; 'Minimum number of words:' with a numeric input field set to '0' and a small icon; and 'Explanation or submission guidelines:' with a large text area. Below the text area, there is a small line of text: 'This text will be displayed at the top of the submission form for this content type. It is useful for helping or instructing your users.'

Minimum number of words: we can set the number of words in the text body. This setting is useful to exclude the in their extent inapposite or the the type inapposite texts. The system accepts the remark as valid, if the words number more than the value set here.

Explanation or submission guidelines: We may bind governing principles to the submission of the content here concerning proposals. This text occupies a position above the suitable field then on the submission side away.

3.Workflow

It is possible to put the activities being attached to the appearance of the content sent in already in here. It is defined that with the contents sent in we let him happen. Users taking action may modify the settings by an administrative permission.

Workflow

Default options:

- ☐ Published
- ☒ Promoted to front page
- ☐ Sticky at top of lists
- ☐ Create new revision

Users with the *administer nodes* permission will be able to override these options.

Published: Published a switch defines it, that the content sent in for the publicity available.

We bring a semi-finished content onto existence which we may make later public one if we turn this off.

Promoted to front page: Promoted to front page a switch may position it, that the content appears on the

title page or not.

Sticky at top of lists: The contents appear on the title page in a reverse chronological order, that is the latest news is on top of it. this news will be the first if we switch the switch on.

Create new revision: at the time of his starting the content modification preserves the previous version that we should be able to use it later possibly. Modifying a content definitively overwrites the previous version without this.

4.Default comment setting:

We can set the options of the comment contents.

this options are :

disabled
read only
read/write

Default comment setting:

- ☐ Disabled
- ☐ Read only
- ☒ Read/Write

Users with the *administer comments* permission will be able to override this setting.

for this

Save content type

Delete content type

These settings concern the unregistered users.
