

There are some worrisome problems with my Mail2Web installation, which overall is working pretty well.

There are two, possibly related, issues:

(1) When I use mail2web and more than one email is submitted into the forum in between cron runs, then (a) it only processes the first email that was sent through, (b) in a pink box, four separate "bad message number" errors appear as shown in the screenshot (when the cron is done manually that is) ... (c) on subsequent runs it seems to then process the remaining emails (one at a time I believe.)

The screenshot shows the Drupal administration interface for "Email-enabled forums". The breadcrumb trail is "Home > Administer > Reports". The left sidebar contains a "Main Menu" with "Forum Area" and "Forum Archive", and an "admin" section with "My account", "Create content", "Administer" (with sub-items: Content management, Site building, Site configuration, Messaging & Notifications, User management), and "Reports" (with sub-items: Recent log entries, Top 'access denied' errors, Top 'page not"). The main content area is titled "Status report" and contains a pink box with four warning messages:

- warning: imap_header() [function.imap-header]: Bad message number in /home2/localdev/public_html/em6/sites/all/modules/mailhandler/mailhandler.retrieve.inc on line 614.
- warning: imap_fetchstructure() [function.imap-fetchstructure]: Bad message number in /home2/localdev/public_html/em6/sites/all/modules/mailhandler/mailhandler.retrieve.inc on line 58.
- warning: imap_fetchstructure() [function.imap-fetchstructure]: Bad message number in /home2/localdev/public_html/em6/sites/all/modules/mailhandler/mailhandler.retrieve.inc on line 58.
- warning: imap_fetchstructure() [function.imap-fetchstructure]: Bad message number in /home2/localdev/public_html/em6/sites/all/modules/mailhandler/mailhandler.retrieve.inc on line 119.

Below the warnings is a green box stating "Cron ran successfully." and a paragraph explaining that the status report provides an overview of site parameters and detected problems.

(2) Possibly related: I notice that when I go to Administer>Subscriptions, the number of "notifications in queue" are always getting higher and higher -- the queue doesn't reset down to zero when the mail2web cycle happens. Even though it is usually processing the notification emails and accepting the replies and posting them correctly, the "Notifications in Queue" number always simply increments in number -- now it is up to 462!! See the screenshot.... Isn't that supposed to be clearing itself each time?

Email-enabled forums

Home > Administer > Messaging & Notifications > Subscriptions

Subscriptions Overview Administer **Queue**

Operations

- Run normal queue processing, same as cron run.
- Process only rows marked for immediate sending.
- Delete all notifications in queue.
- Test run queue processing, without updating nor sending messages.

Notifications in queue

Send interval	Number
Immediately	462

Total: 462

Main Menu

- Forum Area
- Forum Archive

admin

- My account

 - Messaging & Notifications
 - Mail to web
 - Message templates
 - Messaging settings
 - Notifications Settings
 - Subscriptions
 - User management
 - Reports
 - Help
- Log out

Development

- Devel settings
- Run cron

AND -- P.S. about item (1) above -- sometimes the errors are more than just those four -- maybe it is because a greater number have been submitted than just two? it is the same four errors repeated a number of times. See image below.

Cron ran successfully.

Here you can find a short overview of your site's parameters as well as any problems detected with your installation. It may be useful to copy and paste this information into support requests filed on drupal.org's support forums and project issue queues.

Drupal	6.10
✓ Access to update.php	Protected
✓ Configuration file	Protected
Cron	
✓ maintenance tasks	Last run 0 sec ago
You can run cron manually.	
✓ Database updates	Up to date
✓ File system	Writable (<i>public</i> download method)
✓ GD library	bundled (2.0.34 compatible)
✓ IMAP	Enabled
Mailhandler requires that PHP's IMAP extension is enabled in order to function properly.	
✓ MySQL database	5.0.75
✓ PHP	5.2.9
✓ PHP memory limit	64M
✓ PHP register globals	Disabled
✓ Unicode library	PHP Mbstring Extension
