

Input Form Integration

Note that this settings apply only to this content type, not to any possible related content types that might extend this profile.
The [Role Signup](#) module is currently not installed. If installed, it would allow you show this node profile only to users who register for specific roles.

☒ **Integrate this node profile with user categories.**

If selected this node profile's form will appear as a new category at the "My Account" - "Edit" pages, just like the profile.module.

☒ **Show this node profile during user registration.**

If selected this node profile's form will be shown on the user register page. Note that this will bypass the node creation permission settings, so this will work for your users regardless if they have access to edit or create their nodeprofile later!

Display settings

This allows you to customize the display of this nodeprofile.

User page display style:

☐ Don't display this nodeprofile on the user account page

☐ Display it as link to the profile node

☐ Display it as full node view

☐ Display it as teaser node view

☒ **Include an edit link to the display**

☒ **Include an add link to the display if they haven't yet.**

If selected and the user has no profile of this type yet, a link to add one is shown on the user page.

Weight:

The weight of nodes of this content type where ever they appear - this applies to the input form integration as well to the display integration.
