

PHPFreeChat is installed on Drupal 6.10. This is found at /admin/content/node-type/book. If I place the setting to “Always” it puts a chat on each page of every book at the site. Those chats have some issues (i.e. changing the chat person's name continuously).

If I set the value to “Per Node” the setting “Show Chat Room” at the node will not take (IOW I commit the change and come back with the setting not set)
